 • Portfolio:
I built it with React.js using i18n, react-router-dom, framer-motion, react-icons, Tailwind and Getform. I've also implemented a useStyles and broken it into components for cleaner and tidier code.
•Weather App: This Weather App shows the implementation of the openweathermap API call with axios. It looks for the weather according to the location you want. It was created with Reactjs and css
•Movie App: This movie application demonstrates the implementation of the TMDB API call. It contains a search, an animated button, and the covers open a modal window with the overviews of your choice. Home redirects to the main search screen. Bootstrap and css were used.
• To do List: It is a project based on a CRUD. Created with React.js, redux-toolkit, react-router-dom and Tailwind.

• **CRUD:** (Create, Read, Update, Delete) This project was created with React.js, implementing redux-toolkit, react-router-dom and Tailwind

•**Participation in an App Using:** React.js . Redux, redux-toolkit, react hooks, css, sass, react router dom, i18n, bootstrap, tailwind, postman, axios, methodology BEM, git, github, trello and scrum. Design copy from Figma templates required for each view. I also implemented useStyles and composed for a cleaner and tidier code.
